Extrasynaptic GABAA receptors: Form, Pharmacology and Function Biophysical properties of recombinant $\alpha 1$ subunit-containing GABA A R channels (R.L.M.). Molecular biological and biochemical techniques have been instrumental in determining the basic properties of ligand-gated ion channels, and by inference, the functional properties of native receptors in the CNS. Pharmacology - Wikipedia Pharmacology is the branch of biology concerned with the study of drug action, where a drug can be broadly defined as any man-made, natural, or endogenous (from within the body) molecule which exerts a biochemical or physiological effect on the cell, tissue, organ, or organism (sometimes the word pharmacon is used as a term to encompass these endogenous and exogenous bioactive species. Functional Pharmacology in Human Brain | Pharmacological ... Most neurological and psychiatric disorders involve selective or preferential impairments of neurotransmitter systems. Therefore, studies of functional transmitter pathophysiology in human brain are of unique importance in view of the development of effective, mechanism-based, therapeutic modalities. It is well known that central nervous system functional proteins, including receptors. Pharmacological and functional comparisons of $\alpha 6/\alpha 2\beta 3$... However, the function and pharmacology of $\alpha 6$ *nAChRs remain poorly understood because of the lack of selective agonists for $\alpha 6$ *nAChRs and the challenging heterologous expression of functional $\alpha 6$ *nAChRs in mammalian cell lines. Functional pharmacology: the drug discovery bottleneck ... Functional pharmacology, especially in vivo, is the integrating driver for drug discovery. It needs to be sustained, and given the same credibility in research settings as that already given to reductionism.

The Histamine H3 Receptor: Structure, Pharmacology, and ... The best-known function of the H3 R is the presynaptic regulation of neurotransmitter release in the CNS and peripheral nervous system. This regulation has been reported for histamine itself, noradrenaline, dopamine, acetylcholine (ACh), GABA, glutamate, serotonin (5-HT), and some neuropeptides.
