Phase-transfer catalyst - Wikipedia Phase-transfer catalysis is a special form of heterogeneous catalysis. Ionic reactants are often soluble in an aqueous phase but insoluble in an organic phase in the absence of the phase-transfer catalyst. Phase Transfer Catalysis Home Page PTC Organics is the only company dedicated exclusively to developing high-performance low-cost processes for the manufacture of organic chemicals using Phase-Transfer Catalysis to improve customer process performance and profit.

phase transfer catalysis - an overview | ScienceDirect Topics Phase-transfer catalysis is a useful procedure for a variety of interesting metal-catalyzed reactions. 54,55 However, only one example of this approach has been reported for the synthesis of diynes by the sp<sup>2</sup>-sp carbon coupling reaction. The Basic Principle of Phase-Transfer Catalysis, Some ... phrase phase transfer catalysis, and although some would tend to disagree with calling the PT cycle a catalytic process in the true sense of the word catalysis, the terminology has been well established and stays, especially since only catalytic amounts of the phase-transfer agents are required for effective phase-transfer action.
